

TERMS: CASH ON SALE DAY

- All bull are guaranteed breeders
- Rogers Valley Feedlot will keep purchased bulls until breeding season for a reasonable fee
- Trucking arrangements available on sale day.

MIDWEST BEEF ALLIANCE MEMBERS

Robuck Cattle Farm

1178 C.R. 1840, Cairo, MO 65239

660-295-4205 • Inrobuck@cvalley.net

Larry & Nena Robuck have been raising purebred ANGUS cattle since 1966, with the current herd consisting of 300 producing females. They have been selected for disposition, performance and carcass using AI and natural service sires.

Rogers Valley Farm Gelbvieh

P.O. Box 51, Mendon, MO 64660

660-375-7266 (cell) • rogers_valley_farm_feedlot@hotmail.com

Ron Rogers owns a registered Gelbvieh & Balancer herd consisting of 200 producing females.

Rogers also operates a small commercial feedlot where the Midwest Beef Alliance bulls are developed.

Lincoln Gelbvieh Farm

24292 Hill Rd., Linneus, MO 64653

660-895-5008 • 660-412-3475 (cell) • lincoln@grm.net

Richard Lincoln has been raising purebred Gelbvieh cattle since the mid-70s with the current herd consisting of 100 producing females. Emphasis is placed on performance, disposition, calving ease and carcass quality.

1/2 SEMEN INTEREST RETAINED

All bull sell with 1/2 semen interest being retained by the consignors. The buyers get full possession and control of the bull and 100% of his salvage value. If in the future semens sales should become a possibility, the consignor has the right to 1/2 of the semen sales revenue. The reason we are retaining interest is that more bulls are being discovered later in life after they prove themselves in the breeding pen. We reserve the right to collect semen at the buyer's convenience for use in our herds or to test semen demand.

This is a "win-win" situation. We expect these bulls to sell for commercial prices, but the buyer could receive substantial premiums if semen demand develops.

ABBREVIATIONS AND DEFINITIONS

ADG - Average daily gain from weaning to yearling

ADG ratio - 100 being average

BW - Birth weight

CED - Expresses difference in calving ease of that animal when bred to first calf heifers

IMF - Intramuscular fat measured by ultrasound

MILK - The genetic ability of a sire's daughters to produce milk expressed in pounds of weaning weight

REA - Rib eye area. A measure of muscling, measured both on carcasses and ultrasound

FPI - (Feed Profit Index) An economic selection index designed to aid producers in selecting sires whose progeny will perform in the feedlot and are sold in grade and yield

RATIO - Compares an animal to his contemporary group

WW - Adjusted 205 day weight

YW - Adjusted 365 day weight, unless specified

\$W - an index value expressed in dollars per head in future progeny performance for preweaning merit

A young purebred bull (88%), other 1/8 is red angus. This bull performed well on test. A very eye-appealing bull.

ROBUCK CATTLE FARM - ANGUS FEMALES

These heifers are sisters to our bulls we are selling. Richard and Brian Pemberton have developed our heifers for 13 years. They never see corn silage but are grown on excellent forage. They started calving early September to the pictured bull. He is an excellent grandson of Bismarck 5682 with good calving ease EPD's. If the 10 heifers we bring to the sale all have calves, they will be brought into the ring in groups of five and sold with the top bidder taking choice up to five. IF the buyer wants registration papers they can be provided at cost.

A good Dillinger daughter from the 25 cow family. Performance here. AI Alliance May 12th 2014. PE Gerloff Newsline May 27-July 18. Bred to pasture bull. Late March calf.

43 OUT OF SALE

*The feeding procedure is as follows:
 A minimum of 14 day warming up period on the ration to be fed. All bulls are weighed to start the test and all bulls are weighed at the end of the test. Tests last for a period of 112 to 120 days. At the end of the test all bulls are ultra sounded, measured for height and scrotal measure.*
